<ul> <li>4. Roof to Wall Attachment: What is the WEAKEST roof to wall connection? (Do not include at 5 feet of the inside or outside corner of the roof in determination of WEAKEST type)</li> <li> A. Toe Nails  Truss/rafter anchored to top plate of wall using nails driven at an angle through the truthe top plate of the wall, or  Metal connectors that do not meet the minimal conditions or requirements of B, C, or  Minimal conditions to qualify for categories B, C, or D. All visible metal connectors at ✓ Secured to truss/rafter with a minimum of three (3) nails, and  ✓ Attached to the wall top plate of the wall framing, or embedded in the bond beam, with blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of □ B. Clips  Metal connectors that do not wrap over the top of the truss/rafter, or  Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter position requirements of C or D, but is secured with a minimum of 3 nails.  ✓ C. Single Wraps  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, on beam, on either side of the truss/rafter where each strap wraps over the top of the truss a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side.  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter sides, and is secured to the top plate with a minimum of three nails on each side.</li> </ul>	ass/rafter and attached to  D  re:  th less than a ½" gap from the visible severe corrosion.
A. Toe Nails  Truss/rafter anchored to top plate of wall using nails driven at an angle through the truthe top plate of the wall, or  Metal connectors that do not meet the minimal conditions or requirements of B, C, or  Minimal conditions to qualify for categories B, C, or D. All visible metal connectors at  Secured to truss/rafter with a minimum of three (3) nails, and  Attached to the wall top plate of the wall framing, or embedded in the bond beam, wire blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of the latest connectors with a minimum of 1 strap that wraps over the top of the truss/rafter position requirements of C or D, but is secured with a minimum of 3 nails.  C. Single Wraps  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or beam, on either side of the truss/rafter where each strap wraps over the top of the truss a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side.  Metal connectors consisting of a single strap that wraps over the top of the truss a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side.	ass/rafter and attached to  D  re:  th less than a ½" gap from the visible severe corrosion.
Truss/rafter anchored to top plate of wall using nails driven at an angle through the trustender to the top plate of the wall, or  Metal connectors that do not meet the minimal conditions or requirements of B, C, or  Minimal conditions to qualify for categories B, C, or D. All visible metal connectors and  Secured to truss/rafter with a minimum of three (3) nails, and  Attached to the wall top plate of the wall framing, or embedded in the bond beam, with blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of the metal connectors that do not wrap over the top of the truss/rafter, or  Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter position requirements of C or D, but is secured with a minimum of 3 nails.  C. Single Wraps  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or beam, on either side of the truss/rafter where each strap wraps over the top of the truss a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side.  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter sides, and is secured to the top plate with a minimum of three nails on each side.	re: th less than a ½" gap from the visible severe corrosion.
the top plate of the wall, or  Metal connectors that do not meet the minimal conditions or requirements of B, C, or  Minimal conditions to qualify for categories B, C, or D. All visible metal connectors an  Secured to truss/rafter with a minimum of three (3) nails, and  Attached to the wall top plate of the wall framing, or embedded in the bond beam, wire blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of the secured with a minimum of 1 strap that wraps over the top of the truss/rafter position requirements of C or D, but is secured with a minimum of 3 nails.  C. Single Wraps  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or beam, on either side of the truss/rafter where each strap wraps over the top of the truss a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side.  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter sides, and is secured to the top plate with a minimum of three nails on each side.	re: th less than a ½" gap from the visible severe corrosion.
Minimal conditions to qualify for categories B, C, or D. All visible metal connectors an  ✓ Secured to truss/rafter with a minimum of three (3) nails, and  ✓ Attached to the wall top plate of the wall framing, or embedded in the bond beam, with blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of the B. Clips  Metal connectors that do not wrap over the top of the truss/rafter, or  Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter position requirements of C or D, but is secured with a minimum of 3 nails.  ✓ C. Single Wraps  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps  Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or beam, on either side of the truss/rafter where each strap wraps over the top of the truss a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side.  Metal connectors consisting of a single strap that wraps over the top of the truss/rafter sides, and is secured to the top plate with a minimum of three nails on each side.	th less than a ½" gap from the visible severe corrosion.
<ul> <li>✓ Secured to truss/rafter with a minimum of three (3) nails, and</li> <li>✓ Attached to the wall top plate of the wall framing, or embedded in the bond beam, with blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of B. Clips</li> <li>✓ Metal connectors that do not wrap over the top of the truss/rafter, or</li> <li>✓ Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter position requirements of C or D, but is secured with a minimum of 3 nails.</li> <li>✓ C.
